ELECTRONIC STORAGE AND DISPLAY OF IMAGES STUDY

This project will examine means for electronically storing and displaying pictorial information (such as photographs, maps, periodical pages, etc.). It will compare such factors as cost versus resolution, resolution versus user utility, cost versus access time, resolution versus storage space, etc. It will also determine means of transmitting this type of information within a building and to other buildings and will examine techniques for making hard copies. The study will encompass techniques that are presently available as well as those that are predicted for up to five years hence.

SECRET

This project will provide a technical data base that will be useful in future decisions concerning Information Technology, Real Time Exploitation and perhaps other project areas. It will eventually result in systems that; allow efficient storage of collateral and perhaps current imagery; permit rapid access of such imagery, and; enable fast communications concerning this imagery.
